

BRAJ KISHORE YADAV

Full Stack Developer — Software Engineer

+91-9131647299 | yadavbrajkishore678@gmail.com

linkedin.com/in/brajkishore-yadav | github.com/Brajkishore-yadav

Education

Indian Institute of Information Technology (IIIT) Ranchi

B.Tech in Electronics and Communication Engineering

2028

CGPA: 9.3 / 10

Experience

DeskBuddy

Sep 2026 – Present

Software Engineer Intern (Full-Stack)

Remote

- Contributing to a **full-stack SaaS platform** built with **React.js, Next.js, Node.js, and TypeScript**, working across frontend and backend workflows in a monorepo environment.
- Worked with **PostgreSQL, Prisma, and database migrations** to configure database-driven application workflows and maintain consistent local development environments.
- Configured and worked across multiple backend services including **Core API, Voice Server, and Post-call Server**, gaining hands-on experience with service-based application architecture.
- Used **Docker, npm, Git, and GitHub** to manage dependencies, local services, database synchronization, and development workflows.
- Followed production-oriented engineering practices including **ticket-driven development, feature branching, conventional commits, rebasing, pull requests, and code reviews**.

Projects

BlastRadius – Database Migration Simulator — *Next.js, TypeScript, Node.js, PostgreSQL, Redis, Docker* [GitHub](#)

- Engineered a full-stack simulator to identify **PostgreSQL migration risks** under concurrent production-like traffic.
- Built real-time telemetry for **lock duration, blocked queries, and table rewrites**, enabling live migration analysis.
- Designed a deterministic **0–100 risk-scoring engine** with interactive lock-contention visualization.
- Reduced simulated lock time from **1671 ms to 35 ms** by implementing safer database migration strategies.

Batua – AI-Powered Finance Tracker — *Next.js, React, ShadCN UI, Clerk, Gemini API, Arcjet*

[Live](#)

- Built and deployed a **full-stack finance platform** for expense tracking, budget management, and financial insights.
- Developed responsive interfaces using **Next.js, React, Tailwind CSS, and ShadCN UI** with secure user authentication.
- Integrated **Gemini API** for automated expense categorization, spending analysis, and personalized recommendations.
- Implemented **Arcjet rate limiting and bot protection** to strengthen application security and abuse prevention.

Technical Skills

Programming Languages: C++, JavaScript, TypeScript, Python, SQL

Frontend Development: React.js, Next.js, HTML5, CSS3, Tailwind CSS, ShadCN UI

Backend Development: Node.js, Express.js, REST APIs, RESTful APIs, API Design, Authentication

Databases: PostgreSQL, MongoDB, SQL, Database Management

Core Concepts: Full Stack Development, Web Development, MERN Stack, Data Structures & Algorithms, Object-Oriented Programming

Tools & DevOps: Git, GitHub, Docker, Postman, VS Code, Deployment

AI & Integrations: Gemini API, Clerk, Arcjet, Third-Party APIs

Achievements

- Smart India Hackathon:** Selected from IIIT Ranchi to represent the institute at the national level.
- Problem Solving:** Solved **200+ DSA problems** across LeetCode, Codeforces, CodeChef, and GeeksforGeeks.
- Competitive Programming:** Regular participant in Codeforces and CodeChef contests, strengthening algorithmic problem-solving skills.
